**Internal reference:** RESEARCHER/FCT\_PROJ2017/IBMC/2404/2021

The meeting of the Board of Directors of IBMC deliberated the opening of an international selection tender for 1 vacancy of doctorate to perform duties of scientific research in the scientific area(s) of Basic Medicine- Neuroscience, under a work contract with non-fixed term under the Portuguese labor Law in order to perform duties, as researcher within the project with the reference PTDC/MED-NEU/28623/2017-028623 and the title “Uncovering the mechanistic assembly and function of actin ring networks in axonal biology and pathology.” at IBMC, financed by FEDER - Fundo Europeu de Desenvolvimento Regional funds through the Norte Portugal Regional Operational Programme (NORTE 2020), Portugal 2020, and by Portuguese funds through FCT - Fundação para a Ciência e a Tecnologia/Ministério da Ciência, Tecnologia e Ensino Superior.

### **1. Summary and/or tasks to be performed**

Super-resolution has brought a new exciting perspective on the neuronal actin organization. In axons, a membrane periodic skeleton (MPS) is assembled, composed of periodic actin rings interspaced by spectrin tetramers, with a yet unknown function. ACTinRING will dissect the MPS function in axon biology and pathology. For that, an interdisciplinary team will develop a complementary set of innovative experiments with the main objective of elucidating the mechanism of MPS assembly and maintenance. ACTinRING has a high potential to uncover new mechanisms regulating physiological axon function, including its mechanobiology and electrophysiological properties. In a disease perspective, ACTinRING may establish the MPS as a novel target for axonopathy and axon regeneration.
